Summary

As a passionate Software Engineer, I have developed proficient skills in Python, Java, SQL, and Power BI, complemented by my academic background in AIML. I am eager to leverage my programming abilities in a challenging role.

Education

New Horizon College of Engineering, Bengaluru, Karnataka

BE - Artificial Intelligence and Machine Learning ***– 8.37 CGPA*** ***2023 – 2026 (Expected)***

459 -Sanjay Gandhi Polytechnic

DIPLOMA (Percentage – ***79.49****) Bellary, Karnataka* ***Nov 2019 – JAN 2023***

Skills

- **Programming Languages** - Python, Java, SQL, HTML, CSS
- **Programming Concepts** - DSA, OOPs
- **Core** - Machine Learning, Deep Learning.
- **Developer Tools** - Git, GitHub, VS Code
- **Fundamentals** - Operating System, Computer Network
- **Data Visualization** - Power BI, Matplotlib, Seaborn.
- **Libraries and Frameworks** - NumPy, Pandas, Scikit-learn.
- **Microsoft Office** - Word, Excel, PowerPoint

Projects

AI-Powered Startup Recommendation Engine

- Developed an AI-powered web platform to help founders discover startup ideas, generate funding plans, and explore curated startup insights through a unified recommendation system.
- Built a secure backend using FastAPI and PostgreSQL, implementing JWT-based authentication, bcrypt password hashing, and role-based access control for protected APIs.
- Integrated an AI mentor chatbot and structured idea generation module that produces startup outputs such as problem, solution, market, MVP, risks, and milestones, with multi-LLM provider support and fallback.
- Implemented real-time networking features including group chat, job postings, and co-founder matching using WebSockets and Redis, and containerized the application with Docker for scalable deployment.

Rental Car – E-Commerce Car Rental Website

- Developed a web-based car rental platform that allows users to register, login, browse cars, and book vehicles online with real-time availability.
- Implemented search and filter features to help users find cars based on type, price, and preferences for easy selection.
- Built user modules for booking management, profile updates, booking history, and customer reviews/testimonials.
- Created an admin dashboard to manage cars, bookings, users, testimonials, and contact queries efficiently.

YouTube Trending Analytics Dashboard

- Developed an end-to-end YouTube Trending Analytics dashboard to analyze trending video performance across multiple countries (US, IN, GB) and identify regional patterns.
- Cleaned and standardized multi-country datasets using Python by handling missing values, duplicates, and date formats, and added features like title_length and tag_count.
- Performed sentiment analysis on video titles and tags to classify videos into Positive, Neutral, and Negative categories for better content insights.
- Built SQL queries to extract key metrics such as category-wise average views, top channels, trending duration, and time-series trends, and visualized insights in Power BI using KPIs, charts, and map visuals.

Synthetic Data Generator for Startups – Data Generation & Analytics Dashboard

- Developed a Streamlit-based web application to generate realistic synthetic user and transaction datasets for startups and data testing.
- Implemented dynamic data generation modules with configurable user count and transaction count using Faker and Python.
- Built an interactive dashboard with category and date-range filters, data preview tables, and CSV download functionality.
- Added advanced visual analytics including sales by category, gender distribution, payment method breakdown, top spending users, and trend charts, and deployed the app on Streamlit Cloud.

Internship

Data Analyst Internship (Remote) — Elevate Labs **Nov 2025 – Dec 2025**

- Successfully completed the Data Analyst Internship and contributed to real-world projects and tasks.
- Recognized for analytical thinking, professionalism, and consistent performance throughout the internship.

Machine Learning Internship (Remote) — Cognifyz Technologies **Dec 2025 – Jan 2026**

- Successfully completed a Machine Learning Internship with strong dedication and learning attitude.
- Demonstrated effective communication, coordination skills, and attention to detail while handling tasks.

Certifications

SQL and Relational Databases 101
IBM Skills Build – from Cognitive Class.ai – 2024

Computer Networking
NPTEL Online Certification – 2025
